RESUME SUMMARY

Hi! I'm Jesús, a UX/UI Designer at Socialpoint. I'm working on a LiveOps game called TopTroops! My job involves developing amazing new features for the game, ensuring clarity for the art team, and making sure developers understand the screens, always following our style and standards. This is followed by a well-thought-out asset exportation and implementation in Unity. My goal? Users need to understand my screens at a glance and enjoy them.
